

PIETER MARRES

TEST ENGINEER

PROFILE

Pieter graduated in 2022 with a background in applied AI and robotics, then moved into functional and QA testing. Since then he's tested nautical logistics platforms and streaming services, and now works on enterprise software at 3P. He's curious by nature: when something breaks, he wants to know exactly why.

EXPERIENCE

3P - Functional Tester

FEB 2025 - PRESENT

Team Facility

Context

Working across the full test lifecycle for 3P's products related to facility management, from scoping what needs testing to shipping frameworks and guides the rest of the team and the customer relies on.

Tasks

- Creating test plans and test cases
- Setting up and maintaining test frameworks with cypress
- Documenting test related processes
- Ensures product meet expectations and requirements

Tools

Jira / Postman / Cypress / Azure DevOps / Git

De Agile Testers - Testing Consultant

JUL 2024 - DEC 2024

Port of Antwerp-Bruges - Junior Test specialist

Context

The PoAB has multiple applications to manage all nautical and port-related activities. These comprehensive applications help control and structure the operation of the PoAB. Some help determine how cargo is moved, provide an overview of the various moveable structures such as bridges needed to ensure smooth transit in the port.

Tasks

- Front- and backend testing through exploratory testing and API testing using Postman, among others
- Creating and maintaining test scenarios
- Reviewing automated regression tests with Cypress

Tools

Jira / Postman / Cypress

Devoteam - Testing Consultant

SEPT 2022 - JAN 2024

Liberty Global - Manual/Functional Tester

Context

A new platform to watch live/stream content on mobile, web and TV devices. This is the solution that is used by Telenet and other similar companies in different countries.

Tasks

- Testing the application on different platforms. This includes manually testing the regression tests, creating new test cases and reporting bugs.
- Reviewing the BitBucket merge request to check if the automation test case does not forget any steps.
- Creating tests and testing new features before they are added to the regression testing scope.

Tools

Jira / BitBucket / WikiProjects / Postman / SQL / Json / xray

EDUCATION

2017 - 2022

HOGESCHOOL PXL

- Professional Bachelor
- Applied computer sciences with a focus on AI and robotics

SKILLS

- Stress-resistant
- Adaptability
- Problem-solving
- Time management

PROGRAMMING

- Javascript
- Typescript
- Cypress
- Playwright

LANGUAGES

- Dutch (Mother tongue)
- English (Advanced C1)
- French (Beginner A2)

CERTIFACTES

- Certified Practitioner in Agile Testing (CPAT)

EXPERIENCE

● Devoteam - Intern

FEB 2022 - MAY 2022

Context

The project aims to detect potholes by analysing accelerometer data collected during bike rides. This data is gathered through a mobile app, which also records location information to enable mapping of pothole locations. Various AI techniques are explored to develop the most effective detection model.

Tasks

- Collecting information about machine learning, neural networks and data collection
- Manually collecting data with mobile app.
- Transforming the collected data to be able to use in training the models and testing the model
- Trying and setting up different types of AI models to see which type of model best fits this project. (Machine Learning and Neural Networks).

Tools

Jira / Python / Databricks / Azure
